

by the use of rotatable
electrical commutators..

~~The method of producing~~

~~In a cryptographic~~

In cryptography the method of producing a lengthy irregular series of keying elements for controlling the angular displacements of ciphering commutators, said method consisting of feeding ^{a number of electrical impulses into} a plurality of rotatable switching commutators ^{of n segments} and taking the said impulses as they emerge from the switching commutators from

In cryptography the method of producing a series of elements for cryptographic keying purposes by the use of rotatable electrical commutators.
